Mobile screens advertising the city around the world

At Formula 1 races and international cycling competitions These are just some of the places where mobile screens produced by Screen-LED, which is currently building its headquarters in the Northern Economic Zone of Inowrocław Economic Area, were used

- Our products reach the whole world. We produce mobile screens. These are LED displays mounted on various types of mobile structures. These are small or larger trailers, but also VMS trailers (Variable Message Signs), all based on LED screens - said Radomir Doberstaj, the owner of the company.

Currently, in the Inowrocław Economic Area, a production hall with office and social facilities is being built. The next stage of the investment will be the construction of a warehouse. - We chose this place because the conditions provided by the city are perfect for us, this is what we were looking for - added Radomir Doberstaj. One of such mobile 40-meter large screens was displayed at the recent Inowrocław Economic Exhibition. It was placed in front of the hall in Rabin. The possibility to play PlayStation on this large screen turned out to be a real attraction. Screen-LED is also the winner of the

main prize in the "Best Product of the Year 2016" competition accompanying the IWG.

508/5000

This year, for the first time, during the economic exhibition, a competition "5 for start" was organized, in which young entrepreneurs could win PLN 5,000 for an advertising campaign. Panelflex was the winner. This company was established in June 2015. Its creation is the result of several years of work on a new type of façade material characterized by greater hardness and resistance to damage. This product has already been awarded the Innovation

Voucher award in a competition organized by PAIP.

Let us recall that Inowrocław is also a city of soda production, glass, but also parts for Pendolino, components for Bydgoszcz Pesa, engines, metallurgical charges, diamond tools, books and packaging for many global contractors. One cannot forget about services, which are an equally important component of the city's development. According to the data of the Poviast Labor Office, the unemployment level in Inowrocław fell from 9,154 people (March 2002) to 5,066 (March 2016).
